

D2C BUSINESS INTELLIGENCE DASHBOARD

By: Manya Shukla

1. Project Overview

The objective of this project was to design an interactive Business Intelligence dashboard for a Direct-to-Consumer (D2C) business using Microsoft Power BI. The solution provides actionable insights into sales performance, vendor cost analysis, and marketing effectiveness through interactive dashboards and KPI-driven reporting.

2. Data Preparation

Data Sources

- D2C Sales
- Product Information
- Product Cost
- Marketing Budget
- Advertising Campaigns
- Quick Commerce Sales
- Scheduled Commerce Sales
- Nile Sales
- Date Dimension

Power Query Transformations

- Cleaned and standardized data
- Corrected data types
- Removed unnecessary columns
- Built relationships using a star schema

3. Dashboard Structure

Executive Dashboard

- Sales KPIs and profitability metrics
- Monthly Sales Trend
- Sales by Category
- Sales by City Tier
- Top 10 Products

- Cost & Vendor Analysis**
- Vendor Cost Analysis
 - Volume Discount Analysis
 - Net Vendor Payable
 - Interactive What-if Parameter

- Marketing Performance**
- Marketing KPIs

- Budget vs Spend
- Clicks & Impressions by Medium
- Marketing Funnel

4. DAX Measures

Custom measures developed include Total Sales, Orders, Units Sold, Average Selling Price, Average Order Value, Total Cost, Gross Profit, Gross Margin %, Return Rate, Marketing Spend, Budget Variance, ROAS, CTR, Average CPC, Volume Discount, and Net Vendor Payable.

5. Interactive Features

- Interactive slicers
- Cross-filtering between visuals
- What-if Parameter for Volume Threshold
- Dynamic KPI calculations

6. Key Business Insights

- Skincare generated the highest sales.
- Metro cities contributed the largest share of revenue.
- Vendor payments change dynamically based on the selected volume threshold.
- Marketing spends remained within the allocated budget.
- Overall ROAS was approximately 6.57.

8. Tools & Technologies

Microsoft Power BI Desktop, Power Query, DAX, Data Modelling, Interactive Visualizations.

9. Conclusion

The dashboard delivers an interactive and business-focused reporting solution that enables stakeholders to monitor KPIs, analyse trends, evaluate marketing performance, and make informed decisions using a clean and scalable Power BI report.
